

COMPASS CONTEXT VERIFIES AND CONTEXTUALIZES THE INFORMATION YOU SEE ONLINE

Compass Context provides clarity to any online claim, article link, or supported social media post or video. When you ask Compass Context a question or paste any link, it processes data in real-time from thousands of sources, checks claims, analyzes results using Blackbird.AI's Narrative Intelligence Platform, and generates an accurate answer with footnotes and citation links.

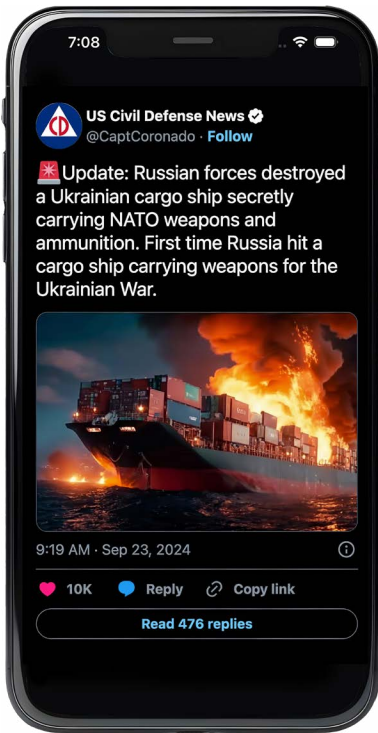

CONTEXT MATTERS

Instantly contextualize online claims, articles, and social media posts, using real-time data and Blackbird.AI's Context API to provide accurate context using trusted sources.

Compass Context provides crucial information about any claim—whether from a social media post, article, or any text-based — by drawing from thousands of reputable sources and presenting it in a simple, summarized view.

It's as easy as it sounds. Just type in a claim, paste something you read, or submit the URL of an article or video. For example, viral stories like "The Eiffel Tower is burning" can be confusing. Memes and posts can spread rapidly across the internet, and many can be hard to debunk.

CONTEXT + DEEP FAKE DETECTION

Detect AI-generated images instantly and gain critical insights into the claims behind them.

IMAGE ASSESSMENT

● AI Generated

CONFIDENCE

The image displays several visual anomalies indicative of a deepfake. The flames and smoke appear unnaturally rendered, lacking the expected variations in texture and density.

COMPASS RISK

● HIGH

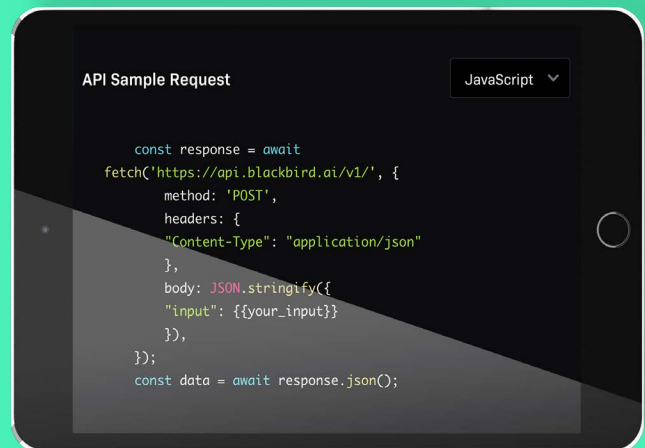

The claim that Russian Forces destroyed a Ukrainian cargo ship secretly carrying NATO weapons and ammunition is not supported by verified sources. There is no credible evidence or reports from reputable news agencies confirming such an incident.

Sources: BBC, Global Affairs Canada

COMPASS CONTEXT API

REALTIME CONTEXT CHECKS AT SCALE

Leverage the Compass Context API to process vast amounts of data at scale, delivering real-time insights and accurate contextual analysis across millions of online claims.

ABOUT BLACKBIRD.AI

[BLACKBIRD.AI](#) protects organizations from narrative attacks that cause financial and reputational harm. Our AI-driven Narrative Intelligence Platform identifies key narratives that impact your organization/industry, the influence behind them, the networks they touch, the anomalous behavior that scales them, and the cohorts and communities that connect them. This information enables organizations to proactively understand narrative threats as they scale and become harmful for better strategic decision-making. A diverse team of AI experts, threat intelligence analysts, and national security professionals founded Blackbird.AI to defend information integrity and fight a new class of narrative threats. Learn more at Blackbird.AI.
