BLACKBIRD.AI

RAV3N RADAR

DECISION-READY NARRATIVE INTELLIGENCE, ON DAY ONE – WHERE YOU ALREADY WORK.

Narrative attacks created by disinformation, misinformation, and deepfakes are targeting your executives, company, and industry, causing financial, reputational, cyber, and physical harm. Blackbird.AI's RAV3N Radar gives you continuous, automated early warning across social platforms, global news, forums, and the deep and dark web, providing decision-ready narrative intelligence insights from day one, with zero learning curve and zero overhead, where you already work delivered directly in Slack or email.

THE PROBLEM

Organizations today have no insight into the threat actors targeting their executives, company, and industry with disinformation based narrative attacks. Most find out when it's too late, when the narrative crisis has already taken hold and spread well beyond their ability to respond, take control, and reduce risk. permitting re-costs, or executive time.

Challenges and blindspots include:

- **How opposition is organizing.**
  Threat actor groups, influencers, nation states
- **Narrative attack spread.**
  Which narratives are gaining traction and why
- **Who is driving them.**
  Organic community, political actors, or coordinated campaigns
- **What action should be taken.**
  How to respond and when silence is the better strategy
- **The learning curve is steep.**
  Sophisticated analytical tools require a dedicated analyst team to get value — and most teams are already stretched thin
- **Time to insight.**
  Intelligence that arrives days or weeks later after the crisis is not viable
- **New tools mean new overhead.**
  Nobody wants to learn another dashboard, and teams want intelligence to show up inside the tools they already use so that they can do their job faster and better

Example narrative attack use cases across social media, news, or an event that threatens an organization include:

- Threats of digital or physical harm targeting an executive
- Early warning signal of a cyber attack
- Emerging narratives targeting company, product and brand reputation
- Breaking news events that have gone public
- Calls to action against a person, organization, or company
- Undermining trust with customers, investors, and employees

RAV3N RADAR DECISION-READY NARRATIVE INTELLIGENCE ENABLES YOU TO 'OWN THE NARRATIVE'

RAV3N Radar provides continuous, automated early warning across the entire digital landscape, - 24/7 monitoring for narrative attack use cases that are important to you, threat actors and audience mapping, velocity signals, topics and escalation detection that turns what it finds into easy to understand decision-ready intelligence — delivered directly into Slack. RAV3N Radar is powered by Blackbird.AI's ground-breaking narrative intelligence context-aware RAV3N Agent.

Organizations stay in control of exactly how RAV3N Radar decision-ready narrative intelligence reaches them, what to alert on, who receives it, when it's sent, and where it's delivered. Each alert documents:

- ☑ **The narrative** — what's being claimed, how it's framed
- ☑ **The origin** — where it started, how it spread
- ☑ **The actors and networks** — who's driving it, what connections exist
- ☑ **The communities being influenced** — which audiences are being reached
- ☑ **The tactics** — amplification, coordination, astroturfing signals
- ☑ **Supporting evidence** — verifiable documentation

RAV3N RADAR FEATURES AND BENEFITS

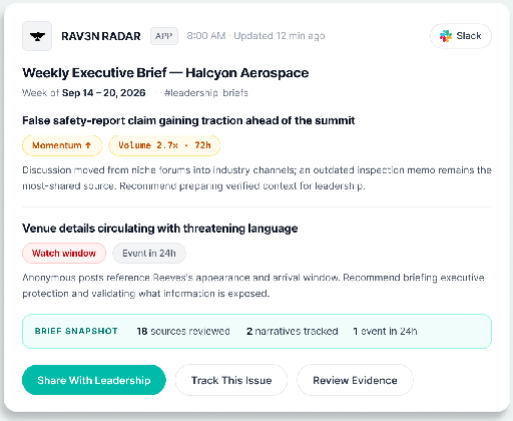

1. **Easy set-up.** Guided onboarding that configures itself. A short set of questions about your executives, brands, and priorities builds your agentic alert engine, so you're automatically getting relevant narrative intelligence from day one, with nothing to install or manage.
2. **Delivered where you work.** Easy-to-understand, decision-ready intelligence is delivered directly into Slack or email.
3. **Fully configurable alerting.** Choose what to alert on, who gets it, how often, and through which channel.
4. **Two alert formats.** Executive Briefs (daily or weekly rollups, including an executive summary) for general awareness, and Real Time Alerts for critical events that need immediate attention.
5. **Purpose-built Alert Packages.** Pre-built templates covering Executive Protection, Brand Risk, industry-specific narratives, Crisis/Topic monitoring, Supply Chain/Vendor insights, Regulatory/Policy, and Threat Actor activity — plus fully custom alerts for anything else.
6. **Quick Actions, right in the channel.** Kick off context-aware responses through Slack — deep dives, actor dossiers, or a request to Blackbird.AI's RAV3N Watch Intelligence team for a full analyst report.
7. **A system that learns.** The more your team interacts with alerts, the smarter and more relevant future alerts become.
8. **A portal when you need one.** Review full alert detail, alert history, and configuration in a dedicated web experience.
9. **A clear path to go deeper.** RAV3N Radar is fully integrated with Blackbird.AI's Constellation Narrative Intelligence Platform for in-depth investigation. RAV3N Radar surfaces evidence of smoke. Constellation provides validation of fire.
10. **Operates alongside your agents.** Blackbird.AI's MCP protocol enhances what your team already uses.

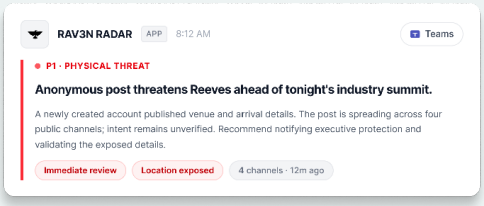

RAV3N RADAR ALERT PACKAGES

ALERT PACKAGES	WHAT IT COVERS
Executive Protection	Physical and reputational threats against named executives
Brand Risk	Rumors, influencer attacks and other reputational risks against the organization and its products
Industry-Specific Packages	Out-of-the-box narrative intelligence coverage tailored to your sector (financial services, healthcare & pharma, technology, energy & utilities, retail, food & beverage, media, telecom, automotive, manufacturing, real estate, government, education, nonprofit, and more)
Crisis/Topic	Customer-configured, often time-boxed tracking for a specific crisis event or narrative attack campaigns
Supply Chain/Vendor	Monitoring for narrative attacks targeting your named vendors and business partners
Regulatory/Policy	Policy, regulatory, and litigation narratives relevant to your industry, region, and operating footprint
Threat Actor	Narratives tied to foreign state actors, threat actors, bot networks, and other inauthentic or coordinated activity
Full Custom	A fully custom alert built with Blackbird.AI researchers for use cases the standard packages don't cover

01 - Weekly Executive Briefing

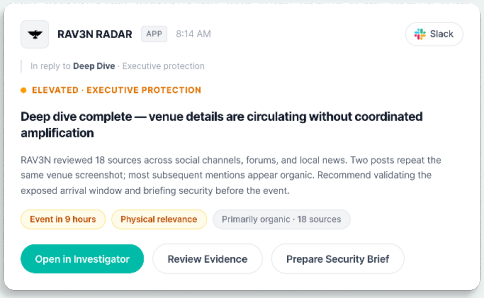

Slack • Scheduled digest

02 – P1 Physical Threat Alert

Slack • Real Time Push

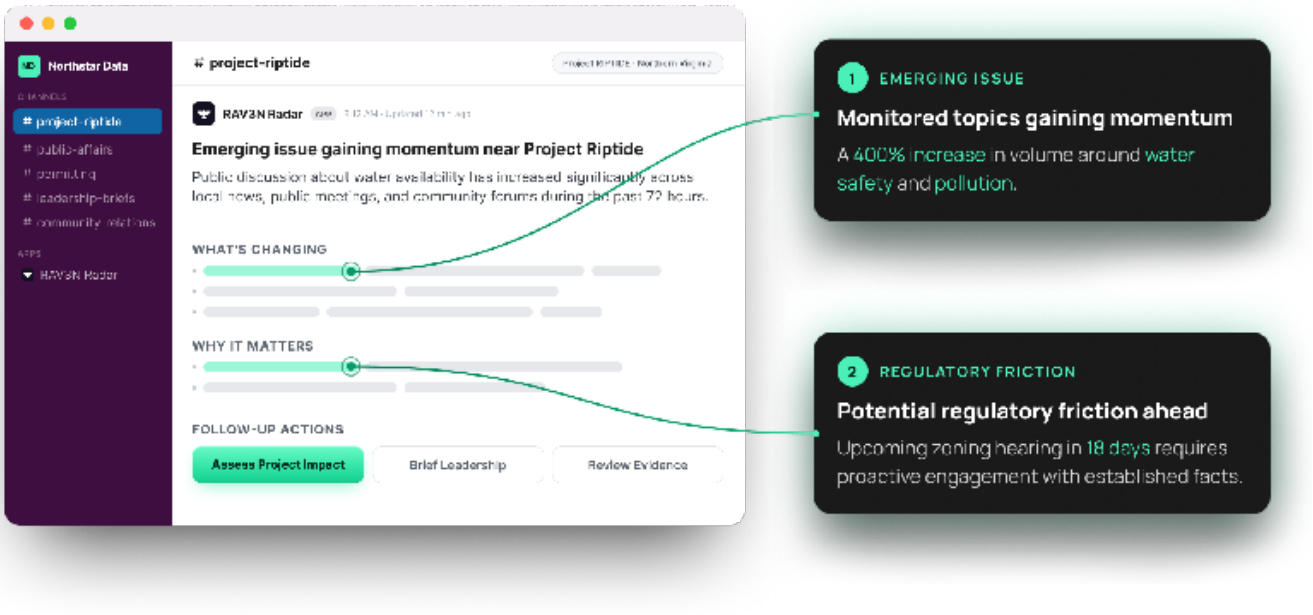

03 - Deep Dive Reply

Slack • Threaded response

RAV3N RADAR: HOW IT WORKS

1. Sign up for RAV3N Radar at Blackbird.AI.
2. Complete a short onboarding questionnaire about your executives, brands, and Narrative Intelligence priorities.
3. Blackbird.AI builds your monitoring profile automatically — nothing to configure manually.
4. Choose your agentic narrative intelligence alert types using pre-built templates to get started fast, or configure custom alerts pinpointed to specific people, topics, or teams.
5. RAV3N Radar does the rest, delivering decision-ready narrative intelligence alerts to the right people, at the right time, through the right channel.

RAV3N Radar delivered directly into a site-development team's Slack channel.

WHY BLACKBIRD.AI RAV3N RADAR

- ☑ **Zero learning curve.**
  No new platform to master and easy setup to gain value day one.
- ☑ **Fast time to insight.**
  Actionable decision-ready narrative intelligence starts flowing immediately after onboarding, not after a lengthy implementation
- ☑ **Built for every team, at every maturity level.**
  Whether you're standing up narrative intelligence for the first time or supplementing an existing security operations team or Comms function, RAV3N Radar fits in seamlessly
- ☑ **Meets you where you work.**
  Easy-to-understand, decision-ready intelligence is delivered directly into Slack or email.
- ☑ **Gets smarter over time.**
  Feedback on every narrative intelligence alert tunes what you see next.
- ☑ **A natural next step.**
  When something warrants deeper investigation, escalate directly to Blackbird.AI's Constellation Narrative Intelligence Platform or request a Blackbird.AI RAV3N Watch Intelligence analyst report — without switching tools

BACKED BY BLACKBIRD.AI'S NARRATIVE INTELLIGENCE LEADERSHIP

Gartner® named Blackbird.AI a Market Shaping Leader in "The Emerging Market Quadrant for Narrative Intelligence – Startup Vendors," as of June 2026, placing the company highest for Potential to Execute and furthest to the right for Potential for Market Disruption.

RAV3N Radar draws on the same shared collection foundation that powers all of Blackbird.AI's narrative intelligence products — mainstream and alternative social platforms and forums, messaging channels, global news, and the deep and dark web:

- ☑ **Broad platform coverage:** Social media platforms, online news and media across tens of thousands of global outlets, a structured global news-event graph, forums, blogs, and the open web, plus deep and dark web sources via licensed intelligence partners
- ☑ **Multilingual by default:** Coverage spans 200+ languages, with translation so nothing is lost in language
- ☑ **Historical depth:** World-event and threat actor context reaching back to 2015, so every new narrative attack is placed against its full prior arc
- ☑ **Two-speed monitoring:** A daily or weekly lane sweeps the full source set on a schedule for your narrative intelligence morning briefing. In contrast, a real-time lane watches high-priority narrative crises, topics, and accounts down to the minute so a spike triggers an alert the moment it happens

ABOUT BLACKBIRD.AI

BLACKBIRD.AI protects organizations from narrative attacks that cause financial, reputational, cyber, and physical harm. Our AI-driven Constellation Narrative Intelligence Platform identifies key narratives that impact your executives, organization, and industry — the influence behind them, the networks they touch, the anomalous behavior that scales them, and the cohorts and communities that connect them. This information enables organizations to proactively understand narrative threats as they scale and become harmful, for better strategic decision-making. A diverse team of AI experts, threat intelligence analysts, and national security professionals founded Blackbird.AI to defend information integrity and fight a new class of narrative threats. Learn more at Blackbird.AI.
